43 Unresolved sources block candidate deletion

Source

```
<c:f>OFFSET(Input!A1,1,0)</c:f>
<worksheetSource name="Table1"/>
<!-- Table1 cannot be resolved here -->
```

Decision

```
<!-- Reference scan is unsafe. -->
<!-- Keep deferred candidates. -->
```

A dynamic object formula or unresolved named source prevents the required dependency proof. Retain reference-sensitive candidates.

Unsafe shortcut. A failed scan must not be interpreted as an empty reference set. Structural cleanup has its own independent guards.

Abbreviated XML. Style IDs are local.
