48 Collapse only the exterior hidden-row tail

Source

```
  <row r="1"><c r="A1"><v>1</v></c></row>
- <row r="2" hidden="1"/>
- <row r="3" hidden="1"/>
  <row r="4" hidden="1"/>
```

Guarded result

```
  <row r="1"><c r="A1"><v>1</v></c></row>
  <row r="4" hidden="1"/>
```

For a trailing, otherwise empty hidden-row run, keep the final boundary. Hidden rows before later content retain their original representation.

Unsafe shortcut. Applying tail collapse inside the data region can change layout. This rule does not promise to preserve exterior blank-grid geometry.

Abbreviated XML. Style IDs are local.
